Data Engineer | Production Data Pipelines | Databricks

Data Engineer with 3 years of experience building production data pipelines and analytics-ready data models across 100+ client engagements. Hands-on with Databricks, PySpark, Delta Lake, SQL, validation, reconciliation, and transformation pipeline development for large ERP and financial datasets.

WORK EXPERIENCE

DELOITTE, US Office of India • Hyderabad, India

Senior - L45 - Data & Analytics • Full-time

Jun 2026 - Present

- Led and Reviewed Bronze-to-Gold pipelines using ADF, ADLS, Databricks Lakeflow, and PySpark for 400M+ journal entry and subledger records, covering ingestion, validation, transformations, risk dashboards, and root cause analysis while reducing manual effort by 150+ hours.
- Leading a team of 6–8 analysts across client engagements, reviewing code, guiding pipeline development, mentoring junior professionals, and training non-technical stakeholders on analytics and data engineering workflows.
- Designed and automated template-based Excel deliverables for large client datasets, including formulas, formatting, and validation checks, reducing recurring manual effort by 60+ hours per year.
- Implemented a custom completeness and reconciliation gold layer pipeline for financial data, reducing manual journal entry to trial balance reconciliation effort by approximately 4–6 hours per client for across 12 clients.

Analytics Specialist Senior Assistant • Full-time

Jun 2025 - May 2026

- Co-developed an Azure Databricks pipeline for 150M+ engine, truck, and sales records stored in ADLS, using concurrent Silver-layer processing, broadcast joins, retry logic, and schema checks to power 3 dashboards and Excel-based testing deliverables.
- Designed a new ESG data pipeline from scratch for 30+ semiannual files with different formats, using PySpark to normalize schemas, apply Silver-layer transformations, and create Gold-layer datasets powering 6 Tableau dashboards.
- Built a PySpark and Pandas data cleansing pipeline to detect and fix split-line and delimiter issues in raw files, reducing delivery time from 3 days to a few hours. The solution is now reused across 6 large client pipelines.

Analytics Specialist Assistant • Full-time

Aug 2023 - May 2025

- Reduced data validation time from manual review to seconds by building automated quality and completeness checks, later deployed across 40 client data pipelines as part of the validation suite.
- Co-developed a Databricks and Power BI pipeline for 10M+ records across 4 client business entities, enabling auto-triggered dashboard refreshes used in leadership discussions and contributing to a successful 5-year client renewal.

TECHNICAL SKILLS

- **Languages:** Python, SQL
- **Big Data:** Azure Databricks, Data Pipelines, Delta Lake, ETL, Lakeflow Jobs, PySpark, Spark
- **Cloud:** Azure Data Factory (ADF), Azure Data Lake Storage (ADLS)
- **Warehousing:** Data Modeling, Medallion Architecture, Query Optimization
- **BI/Reporting:** Excel, Power BI, Tableau

EDUCATION

Indian Institute of Technology, Madras (IITM) • M.Tech in Artificial Intelligence • Online, Ongoing

Indian Institute of Science (IISc) • PG Certification in Computational Data Science • Bangalore

Dec 2024

Vellore Institute of Technology (VIT) • B.Tech in ECE • Vellore

Apr 2023

CERTIFICATIONS

IBM Data Science Professional Certificate

Tableau Business Intelligence Analyst Professional Certificate

AWARDS & RECOGNITION

Shining Star Award

Recognized for automating analytics workflows and reducing manual effort by 150+ hours across client engagements.

Applause & Spot Awards, Deloitte

Received 4 Spot Awards and 1 Applause Award for delivering high-impact analytics and workflow solutions.

PROJECTS

Explainable Journal Entry Anomaly Detection

Implemented an anomaly detection framework for journal entries using Isolation Forest and Autoencoder models, reaching ~92% accuracy on synthetic datasets and adding explainability features to show key anomaly drivers.

Utile - Python Concurrency Toolkit

Created a decorator-based Python package for concurrency and async task orchestration with 20,000+ PyPI downloads, used across data pipeline workflows.
